# Installation

In only 5 steps.

---

1. Download and Extract.

After downloading pwrusr7bundle.zip - open your files app and find the .zip. Double clicking it should extract it.

You should see this.

2. Go to https://ai2.appinventor.mit.edu and locate the Projects dropdown.

Select Import project (.aia) from my computer and select pwrusr7.aia from the file we downloaded.

It should start loading up in AppInventor.

3. Now we need to start the program. Make sure you have MIT AI2 COMPANION Installed for this to work. It's available on the playstore for free.

Select the Connect dropdown and select Chromebook. The helper app should automatically open up and start Poweruser. Keep in mind that you may need to log into a google account.

Quickstart

Need quick help? Press the ? button on the toolbar or type in pwrusr://info in the search bar! A document should load up telling you the basics on how to use Poweruser.
